The most important thing we learned is what this course taught us in general, which is the importance of all the planning rather than solely focusing on the coding aspect. Each milestone helped us thoroughly explore each step of the planning process.

Another important thing we learned was different types of planning and how each type differs. It let us see how the program works from multiple perspectives which made actually programming it feel much smoother.

On the technical side, we learned how to use WinForms, specifically in C++. This made us better programmers because we learned how to read documentation whenever we got stuck. Additionally, for many members of our team, this was one of their first experiences with GitHub, so this project helped them learn more about how it works.

In general, we learned how to work as a team to get things done. This may not always be easy with everyone's different schedules. However, this gave us the experience of how to still effectively get work done.
